

IRO Certificate #4599

NOTICE OF INDEPENDENT REVIEW DECISION

March 10, 2003

Re: IRO Case # M2-03-0581

Texas Worker's Compensation Commission:

___ has been certified as an independent review organization (IRO) and has been authorized to perform independent reviews of medical necessity for the Texas Worker's Compensation Commission (TWCC). Texas HB. 2600, Rule 133.308 effective January 1, 2002, allows a claimant or provider who has received an adverse medical necessity determination from a carrier's internal process, to request an independent review by an IRO.

In accordance with the requirement that TWCC assign cases to certified IROs, TWCC assigned this case to ___ for an independent review. ___ has performed an independent review of the proposed care to determine if the adverse determination was appropriate. For that purpose, ___ received relevant medical records, any documents obtained from parties in making the adverse determination, and any other documents and/or written information submitted in support of the appeal.

The case was reviewed by a physician who is Board Certified in Neurological Surgery. He or she has signed a certification statement attesting that no known conflicts of interest exist between him or her and any of the treating physicians or providers, or any of the physicians or providers who reviewed the case for a determination prior to referral to ___ for independent review. In addition, the certification statement further attests that the review was performed without bias for or against the carrier, medical provider, or any other party to this case.

The determination of the ___ reviewer who reviewed this case, based on the medical records provided, is as follows:

History

The patient is a 41-year-old male who on ___ developed back pain with some left hip pain after a lifting injury. Physical therapy was of no benefit to the patient. An MRI on 2/23/02 showed multiple areas of degenerative disk disease change in the lumbar spine without any specific surgical problem seen. A CT myelogram on 5/31/02 showed a small left-sided L5-S1 defect, possibly relating to disk rupture, and suggested the same changes in areas as had been suggested by the MRI. Other than only questionably positive straight leg raising, the patient has no findings to suggest nerve root compression.

Requested Service

Discogram with CT scan – L2-3, L3-4, L4-5, L5-S1

Decision

I agree with the carrier's decision to deny the requested multi level discographic evaluation.

Rationale

It is so medically improbable that the requested multi level discographic evaluation would be beneficial in coming to therapeutic conclusions, that its pursuit is not indicated.

Discography can sometimes be very helpful, but under the circumstances that it is helpful there is usually a specific area that is being looked at as the source of the patient's trouble.

This medical necessity decision by an Independent Review Organization is deemed to be a Commission decision and order.
